

Swallow (GB) Ltd

QUALITY TIMBER GREENHOUSES
& GARDEN BUILDINGS

PRODUCT BROCHURE SUMMER 2018

"Inspired by Tradition"

"Made like they used to be"

Swallow GB Ltd is proud to be a leading UK greenhouse manufacturer. We install all our own buildings anywhere in mainland UK.

Established in March 2009, our aim is to be the country's largest and respected quality timber greenhouse manufacturer, and we are on target. The company ethic is simple, and that is to consistently provide care and attention to detail, value for money, outstanding service and above all respect our customers.

As a result, at Glee NEC Birmingham we won the New Products Award in 2010 and again in 2011 plus the Best of British Award in 2011, based on innovation, design, quality of manufacture and value for money.

All Thermowood used by Swallow (GB) Ltd. Is manufactured from quality red wood pine. The process involves kiln drying the timber which is then put in a special oven where a powerful compressor removes the air. The temperature is raised to 215 degrees C which bakes the timber. The result seals the capillaries, destroys resins and proteins and stabilises the timber.

The benefits are:

- It can be left untreated
- All bacteria is killed, resulting in a sterile material
- Paints excellently and lasts up to three times longer
- The timber is totally natural and chemical free
- Reduced thermal conductivity
- Consistent colour throughout the wood
- Improves durability against decay
- Improved dimensional stability
- Good choice for allergy sufferers

"Inspired by Tradition"

How to keep your Greenhouse in tip-top shape

A greenhouse is an excellent addition to any garden, whether a novice or a time honoured gardener, it is always good to receive a few tips. Your new Greenhouse will give you the ability to extend the growing season, with the possibility to grow produce that would not usually grow in your area of the Country.

All our Greenhouses are fitted with automatic vents allowing, ventilation and temperature control. These help to make the greenhouse efficient and with the inclusion of a regular cleaning routine will keep your Greenhouse pest and disease free.

MOULD

By far the biggest problem that you might come across in your Greenhouse is mould. However, with a few simple steps your greenhouse should be mould free all year round.

Grey mould is caused by the fungus *Botrytis Cinerea*, a common fungus with a wide host range. It produces a large amount of spores that move around the Greenhouse via air currents. To help control the grey mould a control of the environment should be maintained, and this will prevent the fungus growth and to sporulate. By keeping the humidity level below 85%, as well as ensuring good air circulation and adequate plant spacing .

ANNUAL GREENHOUSE CLEANING

In the first instance it is a good idea to find which way suits you best. With the Seasons in mind, a warm sunny day will

put less stress on the plants when you move them outside. This will enable you to use cleaning solutions without the worry of damaging or spills on any of your plants. Working from the top to bottom, clean the windows thoroughly with soapy water, adding one part bleach for ten parts of water if you can see mould or moss growth.

Sweep off any growing tables or staging to clear out any dirt or weed remnants. Discard broken or unsuitable growing containers. Clean and sterilize any benches and tools. Sweep and disinfecting the floor, another step pertinent to maintaining a disease and pest free greenhouse.

This is also a good opportunity to clean the outside of the Greenhouse, clearing gutters, opening vents to clean thoroughly, cleaning windows.

DAILY GREENHOUSE UPKEEP

To maintain a healthy and well balanced area for you plants to grow, a routine daily maintenance schedule is a good idea. Just simply sweeping, weeding, removal and disposal of infected plants or damaged plants. Areas kept clean and tidy. As you become more familiar with your Greenhouse you will be able to notice where any maintenance is required.

All these little measures will add up to a healthy growing environment for your plants, with an abundance of growth.

Our fantastic potting sheds

Available in two gable widths: Jay 2035mm (6'8) and Rook 2660mm (8'9). Our innovative design enables growing room to be maximised while allowing for all important storage space. Two rear shelves are supplied as standard in addition to staging at the front of the shed.

To aid ventilation there is an opening end window with manual stay and there are two opening automatic vents in the roof. The roof is covered with vinyl for durability. Under the floor runners are plastic strips to keep the timber off the ground and extend the life of the building.

THE EAGLE 'VICTORIAN INSPIRED'

The Eagle is a Victorian styled design with a modern twist. Made to stand out in any garden. It is made from the same timber (thermowood) as all our other greenhouses.

Black PVC gutter

These are all the standard features on the Eagle

- Toughened glass
- Stainless steel nails
- Black ornate handle, hinges and window stays
- Black automatic bayliss openers
- Black gutter system including 2 down pipes
- Vent in rear gable
- Staging and high level shelf down one side
- Side and roof vents
- Black aluminium cresting
- 2'6" wide joinery traditional styled door

Black ornate door handle

Black ornate stay for side vent

Staging and high level shelf

**Roof automatic
vent opener**

**Black ornate
aluminium cresting**

All gables have centre vent

Optional Extras - Combination Shed

A combination shed provides ample storage options for the gardener and is constructed from quality tanalised timber. Available in two lengths, 1290mm (4'3) and 1920mm (6'4), the shed has shelving supplied as standard. The roof is covered with vinyl for durability. There are also a number of additional options as detailed below:

Guttering

Additional Door

Fixed Window

Opening Window

Additional Shelves

Greenhouses & Potting Sheds

Why not complement your greenhouse or potting shed with the following additional extras, designed specifically for Swallow (GB) buildings.

High-Level Shelving
250mm (10")

Bench with low shelf.
Available in 550mm (1'10), 1200mm (3'11) or 1800mm (5'11)
Height of bench is 745mm

Ornate Black
Handle Set

Side/End Vent

Rainwater System
(Quality Black PVC)

Cresting.
Available in: Bracken, Vert De Terre, Lily
White, Black/Midnight, Moles Breath

Extra Staging

The Cold Frame available in:
Wren: 640mm x 1350mm (2'1 x 4'5) or
Sparrow: 1010mm x 1350mm (3'4 x 4'5)

End Vent

Swallow (GB) Ltd - Thermowood, Oiled & Painted - Price List 2018

Base Advice

The ideal base for the greenhouse would be:

- i) Paving slabs to encourage natural drainage OR
- ii) Solid concrete base to the size of the greenhouse with a minimum 4 inch thickness OR
- iii) Concrete strip footing with a minimum 4 inch thickness
- iiii) Dwarf wall can be built - heights to be advised

The base can be larger than the greenhouse if required by the customer but it must not be any smaller.

Most importantly the base must be level.

Lean-To Base Advice

There are additional factors to consider if a lean-to greenhouse is purchased. In addition to the advice above, the following must also apply:

- The base must be 90° to the wall and level
- Swallow (GB) will ask if the wall is straight and will request photographs if necessary

Swallow (GB) will ask the type and height of the wall upon receipt of the order.

Access Information

We require the following height clearances for access as all panels are pre-glazed in the factory:

Finch, Cygnet, Jay, Kingfisher – 6'6

Lark, Robin
Mallard, Swan, Raven, Rook, Falcon, Eagle – 8'6

Once the order is received, we will forward a base plan for the building. We then ask you to contact us when the base is ready to enable us to plan installation.

Specifications

All Swallow (GB) buildings have the following features as standard

- All the redwood pine is thermally modified
- All the boards are fixed with stainless steel nails
- The inward-opening door has a mortice lock and lever handle
- All the glass is toughened (tempered) safety glass (three times stronger than standard)
- The glass is slid into a groove and sealed with quality silicone (this is very reliable and makes it resilient to adverse weather conditions)
- The glass shapes are joined with a clear plastic 'H-Section' (clean-looking and easy to wipe)
- Each roof vent is fitted with a Bayliss automatic opener
- There is a 24mm plastic section fixed around the bottom of the greenhouse. This keeps the timber off the ground, prolonging the life of the building
- Gutter system if stated

Agent Stamp
